Ah-Choo!: The Uncommon Life Of Your Common Cold

Synopsis

Some colds are like mice, timid and annoying; others like dragons, accompanied by body aches and deep misery. In *AH-CHOO!*, Jennifer Ackerman explains what, exactly, a cold is, how it works, and whether it's really possible to "fight one off." Scientists call this the Golden Age of the Common Cold because Americans suffer up to a billion colds each year, resulting in 40 million days of missed work and school and 100 million doctor visits. They've also learned over the past decade much more about what cold viruses are, what they do to the human body, and how symptoms can be addressed. In this ode to the odious cold, Ackerman sifts through the chatter about treatments-what works, what doesn't, and what can't hurt. She dispels myths, such as susceptibility to colds reflects a weakened immune system. And she tracks current research, including work at the University of Virginia at Charlottesville, a world-renowned center of cold research studies, where the search for a cure continues.

Book Information

Hardcover: 256 pages

Publisher: Twelve; 1 edition (September 2, 2010)

Language: English

Starred Review An entire arm of science—*even a British research center called the Common Cold Unit (CCU)—dedicated to studying the common cold? Why not? Certainly an ailment that supports a multibillion-dollar industry of mostly quackery ought to inspire a certain amount of scientific interest. Indeed the common cold is far from being the stuffy subject one might expect. In the hands of gifted science writer Ackerman, the cold is addressed with dry wit while she covers every detail from soup (chicken, of course) to nuts (folk remedies). Only a science writer can find being intentionally inoculated with a cold virus and sequestered for a weekend entertaining.*

Among the lesser-known facts she reveals: colds are caused by more than 200 different viruses, one of which can even make you fat! What's more, building up one's immune system may exacerbate a cold's symptoms; and as for those trendy antibacterial soaps and lotions, they are worthless against cold viruses. Amid all this "nasal gazing," there is one folk remedy that may be worth considering. In *Domestic Medicine* (1772), William Buchan instructs, "Go to bed, hang your hat on the foot of the bed, and continue to drink until you see two hats." --Donna Chavez

I heard the author on NPR and instantly captured my attention. Cold is a part of my family (2 kids) once school starts. Did not have great expectations of the book; but whatever limited expectations I had off the book, it delivered. Well, my objective of the book was to understand cold better so can reduce the number of times our family members get sick. Unless you are a medical professional, the only reason probably you are thinking of reading this book is because of the nuisance this cold in your home. Did you know (and ways to mitigate)?> What causes sore throat?> Does green mucus means infection?> What is cough?> How old are you? and How often do you get cold?> Do you get cold more in winter?> Fatigue's relationship with cold?> Does sleep get in bed with cold virus?> Even interesting correlation between wealthy childhood vs non wealthy childhood. While the conventional theories of sneeze on your sleeves, use sanitizer etc are known to everybody, the book emphasized the power of hand - eye - nose combination that seems to be the primary transmission source. As a direct consequence of reading this book, whenever someone in my home came with a cold, have been using lysol wipes to wipe the door knobs, faucets, TV remotes, switches, sofa and so on... Takes about 5-10 min and I am certain has reduced cold instances in my home. Worth the price and certainly worth the time! A MUST READ IF YOU HAVE SCHOOL GOING KIDS.

Highly recommend for anyone interested in learning about our body process! I had to read it for school but I have been recommending to friends.

This book was fascinating! I thoroughly enjoyed reading about the common cold, research being done to find out more about the common cold, and even the remedies in the back offering

suggestions that will help you alleviate those common cold symptoms.

Looking for an interesting read try this book out. Talks about studies and information about the common cold

"Achoo" is both very enlightening and enjoyable. The author, Jennifer Ackerman, explores the history of research on colds, cold viruses, the symptoms, transmittal, and the efficacy of common cold fighting treatments and medicines. The book dispels many common myths about the common cold. The writing style is clear and easily read. Ackerman explains the science in a clear straight forward way that is readily understood. Ackerman's "Achoo" reminds me of the books by Mary Roach which I enjoy and highly recommend.

According to Jennifer Ackerman, author of Ah-Choo, the average adult will suffer approximately 200 colds in a lifetime with each one occurring about twice a year. This translates into about five years of cold symptoms and a full year in bed. That is a lot of Kleenex tissues! In Ah-Choo, Ackerman investigates how colds are transmitted; the latest research developments for preventing/curing the "common" cold; and the best treatment of cold symptoms. Unfortunately, much of the medical research detailed by Ackerman does not provide significant hope for cure, prevention, or even treatment of a cold. Rather it appears that due to the cold's evolving nature a cure is long way off. Moreover, the best ways to prevent a cold are the low tech methods: engaging in frequent hand washing, refraining from touching/contaminating one's face; and avoiding children (who are the frequent bearers of cold viruses) - which is, of course, highly impractical for parents and teachers. As for treating a cold, a single ibuprofen (or other analgesic), rest, and maybe chicken soup are all that are recommended. Counter intuitively, a cold victim should think twice before trying to build up his/her immune system. One take away from Ah-Choo is that "cold symptoms do not result from the destructive effects of viruses . . . [rather the symptoms are] in response to the presence of a virus [that] the body sets in motion." In other words, the immune system is battling the virus by creating the symptoms that make one miserable! Overall, Ah-Choo does an excellent job of translating technical medical research into a highly readable format for lay readers. Publisher: Twelve (September 2, 2010), 256 pages. Advance review copy provided courtesy of the publisher.

I don't think I will ever see the cure of the common cold in my lifetime, but this book makes me feel better about them and the fact that there is not much you can do but rest and recover. And

everything your mom always told you is pretty much true. My mother always said to keep your hands away from your face, cover your mouth when coughing or sneezing, drink lots of water and have some soup. This book shows you that mom always did know best. Oh, and keep away from small children, they are walking germ factories. Some of the things in this book are truly scary. I mean how often do you think about cleaning out your washing machine? Just think about washing your underwear and where you wear those underthings. Yes, pretty gross. The author goes into detail about the history and treatments that are known to work and are worth buying although, so far, not much.

Who knew I could enjoy myself so much while reading about the common cold? I raced through this book as it was a fun and informative read. As a healthcare professional I found it helpful and can recommend highly.
