The BMT Data Book: A Manual For Bone Marrow And Blood Stem Cell Transplantation

Synopsis

The BMT Data Book serves as a reference to aid the often complex decision-making process confronting today's clinician. Organized according to disorder, hundreds of tables, lists, and figures summarize data necessary to understand transplantation therapy for leukemia, lymphoma, aplastic anemia, breast cancer, testicular cancer, and other malignancies. For each, clinical outcomes are compared between transplant and nontransplant therapies. Additional sections outline procedures, cytotoxic drug regimes, basic science, and laboratory medicine. A concise, comprehensive manual, The BMT Data Book will provide a unique reference tool for all clinicians involved in bone marrow or blood cell transplantation. It may also be used as a companion to Clinical Bone Marrow Transplantation, 1994, edited by Kerry Atkinson.

Customer Reviews

"...his study is well worth the effort. He has taken a 'newsworthy' event of 1247 and through careful, scholarly research, set it in a world of information and thoughtful insights." Catholic Historical Review

"This is a reference book for all clinicians involved in the clinical bone marrow or blood stem cell transplantation. The book has 20 well illustrated chapters, a reference section and an index...This publication is both a useful and unique addition to the scarce BMT textbook literature and a remarkable and courageous attempt to be practical. I look forward to a second edition of The BMT Data Book." Z.S. Pavletic, Annals of Oncology

"The author is well-known in the field of stem cell transplantation...[A] valuable reference for transplanters." Doody Publishing

Bone marrow transplantation (BMT) has recently emerged as a leading treatment world-wide for a variety of cancers. The BMT Data Book serves as a quick reference to aid the often complicated decision-making process facing today's transplant clinician. Hundreds of tables, lists, and figures summarize data necessary to grasp transplantation therapy for leukemia, lymphoma, aplastic anaemia, breast cancer, testicular cancer and others. For each disorder, clinical outcomes are compared between transplant and non-transplant therapies. Additional sections outline clinical procedures, cytotoxic drug regimes, basic science, and laboratory medicine.
