Total Hip Arthroplasty Outcomes, 1e

Synopsis

A short, useful text covering the area of total hip arthroplasty by reviewing and comparing the basic statistics of the leading implants. Total hip arthroplasty is the most frequently performed reconstructive procedure in orthopedic surgery, with over 500,000 replacements performed world wide annually. After four decades of modern total hip replacement, many new designs and biomaterials have been introduced to address problems of fixation and wear. This book presents a clear and concise summary of presently available information on total hip arthroplasty.

Book Information

Paperback: 314 pages

Publisher: Churchill Livingstone (October 17, 1997)

Customer Reviews

This book is a must have for anyone considering hip replacement surgery. It clearly covers the evolution of the technology and techniques most commonly used in an understandable format. While technical, it facilitates easy comparison between the various technologies with valuable information on outcomes, longevity, and durability. It is especially valuable for candidates younger than 50 years who are struggling to find long lasting technology that will require fewer revisions. I highly recommend this book.
