Mary Ann Hogan, RN, CS, MSN has been a nurse educator for 20 years, currently as a Clinical Assistant Professor at the University of Massachusetts, Amherst. She has taught in diploma, associate degree, and baccalaureate nursing programs. A former item writer for the CAT NCLEX-RN, Ms. Hogan has been teaching NCLEX-RN review courses throughout New England for the last 14 years. She has also contributed to a number of publications in the areas of adult health and fundamentals of nursing. Ms. Hogan is an ANCC-certified clinical specialist in medical-surgical nursing and is a member of Sigma Theta Tau.

Judy E. White, RNC, MA, MSN has taught at all levels of nursing, including LPN, diploma, associate degree and baccalaureate programs at schools of nursing in Kentucky, New York, and Alabama. Ms. White has contributed NCLEXRN test questions to numerous publications, and she has taught the pediatric component of NCLEX-RN Review Courses in New York and Kentucky. Currently, she is the Director of Nursing and Nurse Educator at Vital Care, Inc., a home infusion pharmaceutical company that provides continuing education to nurses.

I got this book to review some things for NCLEX and it is EXCELLENT. It is well -organized into the systems of the body and also labs and physical assessment and then presents each issue in an outline format which is easy to read and gives you the important information that you will need to focus on for testing or just to refresh your knowledge. It also give Priority Nursing Diagnosis and what to do a focused assessment on. It was highly recommended by my advisor to some students. I

am planning to purchase some of the other Reviews & Rationale books after I finish this one.

This book saved me during my Maternity & Child Rotation in nursing school. I think my professor used this book as a reference especially the NCLEX style questions. I found the chapter on congenital cardiac problems especially helpful because it was easy to understand with nice pictures. I also loved the growth & development chapter which clearly outlined all the Erickson & Piaget theories. There are 15 chapters in this book covering all the different body systems. I love how this book gets right to the point giving you the information that you need to know without all the extra fluff found in a text book. On the CD there are 10 pre-test, 10 post-test, and 30 extra NCLEX questions per chapter(that's 50 NCLEX questions per chapter). I don't love how the CD is laid out but the questions are very good. Overall this is an excellent reference and study aid for pediatrics.

Bought this book for my pediatric rotation in nursing school. Wish there were more NCLEX style questions to review. There is a ton of extra info on all topics but a little too overwhelming to utilize.

The reviews and rationales are helping me a lot in nursing school, it helps condense the information without leaving out important details. Although I still read the required material from our Pediatrics Book, this helps me understand the key points and the charts are very thorough, yet concise. The pre and post test for each section is a great indicator if I need to spend more time on that unit.

Awesome book. Definitely made reading for pediatric nursing less stressful. Highlights all the key points of every topic and the review questions in every chapter are super helpful. Got a B in peds from just reading this book and reviewing my notes!!

Great review book. Has essential information.

Excellent book for paediatrics course in nursing school and for further reading afterward.

The study CD is missing, and this may be my fault, I may have missed that in the description. That being said, my student daughter is happy to have this for her course work.
